X Data capture

Data Capturing Desk

The recording of goods and letter consignments is greatly simplified: dimensioning, weighing and image verification are completed with a single click.

In contrast to conventional solutions, the patented "Symbolic Light" technology enables dimensioning within a few milliseconds - with repeat accuracy and independent of the user. Selected components from Keyence or Cognex are used for this purpose.

Another feature of the XPROMA Data Capturing Desk is the height adjustability of the camera technology to cover any product range.

Parallel to the 3D measurement, other data records such as barcodes, weight and images are then transferred directly to the customer system via freely selectable interfaces, for example in the incoming goods area. Capturing multiple barcodes simultaneously is also no problem.

Configuration options

- Weight detection
- Illumination
- Color/grayscale image
- Barcode identification
- 3D Measurement

XPROMA

Data Capturing Conveyor

The recording of data for your packages (boxes, bags, letters, etc.) plays a central role in modern logistics processes.

These include master data / global data (weight, dimensions), image verification in outgoing goods and barcode reading with the highest reading rates.

The XPROMA Data Capturing Conveyor offers you the option of creating data at various points in the process. The requirements can be flexibly adapted according to your wishes.

Furthermore, the Data Capturing Conveyor can be seamlessly integrated into your existing conveyor technology or supplied as a stand-alone solution.

Configuration options

- Weight detection
- Color/grayscale image
- Illumination
- Barcode identification
- 3D Measurement
- Sorting
