

XPROMA

Goods-to-Person FLEXYPICK VON SCALLOG

The innovative "goods-to-person" solution for automated storage is based on a system of autonomous robots and mobile shelves that ensure greater flexibility and efficiency in warehouses.

The required products are brought directly to the employees. This saves unnecessary journeys and optimizes storage space.

The use of ultra-modern, automated storage and retrieval systems (Automated Storage and Retrieval System / ASRS) ensures a future-oriented logistics concept.

Through the interaction of humans and mobile robots, we ensure maximum productivity of your warehouse.

The **XPROMA** solution can be perfectly integrated into your storage system. This ensures the long-term performance of your logistics concept through automation and also means that no infrastructure changes are necessary.

XPROMA

Our solution for item and order-optimized warehousing is ideal. It has a modular structure and can therefore be adapted to complex and growing requirements.

The robotic solution for warehouse logistics eliminates time-consuming tasks. This guarantees optimum utilization of work capacity and reliable order processing. Benefit from improved operational efficiency and reduced operating costs.

The simple installation and use of the system immediately increase your operational efficiency - with low investment costs.

Forward-looking planning of infrastructure requirements is a key factor for a growth company. Its success depends on the adaptability and agility of its logistics concept.
